ChartMaker® Practice Manager Release Notes

ChartMaker® 2018.2 (fv6.6.3)

Important Notifications

- **Upgrade from Microsoft Server 2008 and Windows 7 –** Since January 2020, your Windows 7 workstations and Microsoft 2008 Servers are no longer supported. Even with security patches, **problems may still arise** if you choose not to upgrade. In addition, your workstations are not HIPAA compliant. To avoid these issues, contact our **Technical Services Department** today.

- **SQL Server 2016 & the ChartMaker 2018.2 (File Version 6.3.3) Upgrade –** Beginning with ChartMaker 2018.2 (File Version 6.3.3) Upgrade, a warning message will appear upon the completion of the upgrade regarding the transition of the ChartMaker Medical Suite to using SQL Server 2016, for those offices where an automated upgrade to SQL Server 2016 was not possible. See the figure below. If you are receiving this message, to avoid potential issues and to ensure your system remains HIPPA compliant, it is important to contact either STI Hardware Helpdesk, or your software vendor, to review your options.

ChartMaker Medical Suite SQL Server 2016 Warning

Charge

- **Charge – Enter a Charge – Quick Pay** – The **Charge List – Quick Pay** dialog has been updated with a **Pending Payments** section that contains any pending payments for the patient, allowing you to select from these pending payments and apply it to payments being made in the Charge List – Quick Pay dialog. See Figure 1. This new functionality works in a similar manner that Copay Credits work, where you select the applicable **Pending Payment**, and then click the **Apply** button. Do note, however, that you cannot apply a copay credit and a pending payment at the same time, nor can you select multiple pending payments. When finished you can **Save**, print a **Receipt**, or print a **RP Receipt**.

Clinical

- **Clinical – Immunization*** – The program has been updated to ensure that the latest CVX codes and CVX mappings, MVX codes and MVX mappings, Manufacturers, and NDC codes, per the latest CDC guidelines, are used for immunization procedures.

  * This feature was released in the CMMS 6.6.3.431 hot fix release.

- **Clinical – Immunization – Immunization Registry – NJIIS** – In previous versions, an issue could arise that result in errors and connection issues with NJIIS due to invalid characters in the Lot Number when using the barcode scanner when entering an immunization. This issue has been corrected.

Patient Billing

- **Patient Billing – Electronic Statement*** – In previous versions, an issue could arise when a patient has duplicate phone number records attached to their account, which would cause a patient billing time out error, when running patient billing for this patient. This issue has been resolved.

  * This feature was released in the CMMS 6.6.3.431 hot fix release.
